

TrueNute Copper Sulfate

It takes very little **TrueNute Copper Sulfate!**

For 1000 gallons, you will only need 0.3 grams per month (that is 1/3 of a gram).
For 100 gallons 0.03 grams per month.

Simple as that, just a tiny pinch as most of us can't measure out 0.03 grams.

Be very careful with Copper Sulfate, if the levels are too high, it will become toxic to the fish and even the plants.

It is best to have your water and plants tested on a regular basis to insure your copper levels are at the correct levels and use a very accurate scale to measure it out.
