

TrueNute PH UP!!!

Thank you for your purchase of
TrueNute PH UP!!!

Thank you for your purchase of TrueNute PH UP!!!

A carefully formulated mix for aquaponics. This is a very easy to use, very easy to apply product. You will use 1 teaspoon per 100 gallons of system water, wait 4-6 hours and check your PH to see if it has changed. If not, you can dose again, but we recommend that you cut the dose in half. Never rush aquaponics. Record everything you do, your PH before you dose and 4-6 hours later along with how much of the TrueNute PH UP you add. Per 1000 gallons, you will want to measure out 1.76 ounces, for less than 1000 gallons, just use a teaspoon as most cheap scales are not going to measure close enough to get it right for your system. If you are unsure of your math, please reach out for help, all of our contact information is below.
